Table A2. Risk and assurance requirements in the UK sample.

Device	What triggers it	What follows	Who decides	Status	Source
Data protection impact assessment	Processing "likely to result in a high risk to the rights and freedoms of individuals"	An assessment before processing	The body	Statutory (data protection law); not specific to AI	UK099
ATRS mandatory scope	Tools with "a significant influence on a decision-making process with public effect" or that "directly interact with the general public"	Publish an ATRS record	The body	Mandatory for the organisations covered; policy, not statute	UK085, UK086, UK190
"High-risk" uses	Defined only loosely, as “high-risk areas which could cause harm to someone’s health, safety, fundamental rights or the environment” (UK174)	Consider whether AI is appropriate; humans validate high-risk decisions	The body	Guidance	UK174
Proportionate assurance	"low-risk" and "high-risk" use cases, not defined	Fewer or more assurance techniques	The body	Guidance	UK206
Depth of testing	Factors such as "impact on legal rights, safety, scale of use, novelty of the tech"; high-risk examples are tools that "could endanger lives or cause legal determinations about individuals"	More exhaustive testing; for high-risk AI, possibly "senior approval or an ethics board decision"	The body	Guidance	UK071
