Table A1. EU AI Act risk tiers and applicable obligations.

Tier	What falls in it	What follows	Who decides	Where
Banned	Practices such as social scoring	Not allowed	The Act	Art. 5
High-risk: product route	Safety components of products (or products themselves) under EU product law that must undergo third-party conformity assessment, such as many medical devices	Provider: risk management, testing, documentation, conformity assessment. Deployer: use as instructed, human oversight, logs	The Act, through product law	Art. 6(1); Art. 26
High-risk: listed uses	Uses in eight areas: biometrics; critical infrastructure; education; employment; essential public and private services, such as benefits; law enforcement; migration and border control; justice and democratic processes	As above; public bodies also assess the impact on fundamental rights, except for critical infrastructure	The provider, which may classify the system out (next row)	Art. 6(2); Annex III; Art. 27
Listed but not high-risk	A listed system that "does not pose a significant risk of harm", which applies only where it meets one of four conditions: it is intended "to perform a narrow procedural task", to improve completed human work, to spot patterns without replacing human assessment, or to do preparatory work. Profiling people is always high-risk	The provider documents its own assessment and registers; the assessment is shown only "upon request"	The provider	Art. 6(3)–(4)
Transparency duties	Systems such as chatbots and AI-generated content	Tell people they are interacting with AI (chatbots); mark AI-generated content as such and disclose deep fakes and AI text published on matters of public interest	The Act	Art. 50
Everything else	All other AI systems	Outside the high-risk requirements; other applicable duties may remain.	—	—
